

Inputs required from The Hospitality Company

Staffing platform — build hand-over checklist

Date	23 September 2026
Version	1.0
Prepared	Prepared for THC by the build team
Status	For action by THC

This document lists everything the build still needs from The Hospitality Company: content, decisions, keys, DNS records and data. Each item says what is needed, why, in what format, how to send it, and what the platform shows until it arrives. The tracker on page 3 is the working list; the sections after it are the detail. Nothing here is a build task, and nothing here needs THC to have seen the code.

Summary

What is built

The Hospitality Company staffing platform is feature-complete. Three applications run on one database: the **Back Office Portal** for THC's office, the **Staff App** — an installable app on the worker's phone — and the **Client Portal**, where a client sees their own events and line-up and never sees money. Every screen in the design pack is built, and every rule in the Scope of Work v1.6 — onboarding, the weekly hours limit, auto-assign, check-in and check-out, pay, notifications, GDPR removal — is implemented and held by automated tests: the rules themselves, the database's row-level security, and the screens.

It runs today on a staging environment with sample data, ready for THC's people to walk through.

What cannot go live without THC

None of the items below is a build task. Each is content, a decision, a key, a DNS record or data that only THC can supply. Until each one arrives the platform shows a clearly marked placeholder, holds the affected messages in a queue, or runs the cautious version of a rule. Nothing is lost and nothing has to be re-entered — but none of it should reach a real worker or client, so these gate UAT and go-live rather than the build.

Five things with lead time

Item	Why it takes time	Appendix B said	Suggested target
7 · DNS records for admin@ and timesheets@	They live with whoever manages THC's domain, take up to 48 hours to spread, and every email the platform sends waits until they are verified.	Before UAT	Two weeks before UAT starts
1 · Willo keys and stage mapping	Needs the Willo account owner and probably Willo support; the first test delivery may show differences we then adjust.	Start of the onboarding build	Two weeks before UAT
2 · The zero-hours contract text	A legal document, usually with a solicitor's review; testers should sign the real text.	Before the contract step is built	Two weeks before UAT
3 · Sample term dates and completion letters	Collecting three to five of each from real students and redacting them; tuning the reader takes about a week after that.	Start of the AI extraction work	Three weeks before UAT
5 and 6 · Old-system export, then the dry-run sign-off	Extracting from Accelerate, agreeing the columns, one import on staging, a checked sample.	Four weeks before go-live; sign-off two weeks before	As Appendix B

Appendix B's "needed by" dates were set against the build; the build is done, so the dates above are re-stated against UAT and go-live. Everything else on the tracker is wanted before UAT, so that what is tested is what goes live.

Tracker

One row per item, in the order of the sections that follow. Tick the box as each is sent; the section number is the item number.

#	Item	Why the system needs it	Format wanted	Who at THC	Needed by	Status
1	Willo API key, interview key, stage mapping (B1)	The application form creates the candidate in Willo and Willo moves the kanban card (§2.4)	Three secret values + the stage list; secrets by password manager or on a call	Whoever administers THC's Willo account, with Willo support	UAT – 2 weeks	☐
2	Zero-hours contract text (B2)	Stored as versioned text; the version each worker signed is recorded against them (§2.11)	Word or PDF, final, with a version label and date	HR lead or director, with THC's employment solicitor	UAT – 2 weeks	☐
3	Sample term dates and completion letters, 3–5 each (B3)	The document reader is tuned and tested against real layouts, not idealised ones (§2.6, §4.5)	PDF or JPG, 3–5 of each, personal data blacked out	Onboarding / compliance manager	UAT – 3 weeks	☐
4	Hi-res logo (B4)	One name and one logo across all three applications (§1.6)	Received – nothing further unless the logo changes	Marketing / brand owner	Received	Done
5	Old-system (Accelerate) export, workers and clients (B5)	Migration is a one-off import, run on staging first and then production (Appendix B5, §4.3)	CSV (UTF-8, header row), one file per table, columns as proposed	Whoever administers Accelerate, with the office manager	Go-live – 4 weeks	☐
6	Migration dry-run sign-off (B6)	THC checks a sample of migrated workers and clients on staging before the real import (Appendix B6)	Email: "signed off", with corrections listed	Office manager, countersigned by a director	Go-live – 2 weeks	☐
7	DNS records for the two sender addresses (B7)	Without them the platform's email is filed as spam or rejected (§9.12)	Records added at THC's DNS host; reply when done	Whoever manages the thehospitalitycompany.co.uk domain – IT provider, web agency or the registrar login	UAT – 2 weeks	☐
8	Production hosting decision and accounts (B8)	Production runs in THC's own account and the code is transferred in full (§1.1)	Email: the owning email address for each account and the administrator; then accept invitations	Director / finance – the account owner and card holder	Before UAT	☐
9	Health & Safety quiz: 10 questions with answers	Step 6 of onboarding; 80% pass mark, three attempts, automatic rejection on the third failure (§2.9)	Word or Excel: question, four options, the correct one	H&S trainer – the author of "Health and Safety Presentation Questions"	UAT – 2 weeks	☐
10	Induction slides	Step 5 of onboarding; the deck is shown as supplied, slide by slide (§10.3)	PDF (or PowerPoint), one page per slide	H&S trainer	UAT – 2 weeks	☐
11	Wording: E2b rejection email	E2 thanks the candidate for completing an interview, which is untrue for a rejection at a later stage (§2.7, §8)	"Approved", or the replacement text	Office manager / recruitment lead	Before UAT	☐
12	Wording: CL1–CL6, and which are mandatory	THC's University Completion Letter requirement §5 adds six sends the §8 register does not name	"Approved" or replacement text, plus the list of mandatory ones	Office manager / compliance manager	Before UAT	☐

13	Privacy notice legal text	The application form asks for GDPR consent and links to it (§1.7, §2.1)	Word or PDF, final legal text	Data protection lead / solicitor	Before go-live; ideally before UAT	☐
14	Retention of right-to-work evidence after a GDPR removal	The completion letter is already held for employment + 2 years; whether the rest should be is a §1.7 decision	Yes / No, with a line on why	Data protection lead / HR	Before go-live	☐
15	Q1 · Replacement arriving late to a full shift	Two rules meet: the No-show exemption for late-confirmed replacements (§5.1) and turn-away pay measured from the scheduled start (RULE-15)	One-line answer	Operations manager, with payroll	Before UAT	☐
16	Q2 · A break with no end	§5.2b allows several breaks a shift and deducts the total, but does not say what a break with no end is worth	One of three options	Payroll	Before UAT	☐
17	Q3 · Clearing a No-show after the shift	Resolving a No-show records the worker as arrived at the moment the manager presses it, with no time limit (§3.3, §9.5)	One-line answer	Operations manager	Before UAT	☐
18	Q4 · Resolved violations and the reliability score	§9.5 says resolving “removes or reduces” the effect on the show-rate, which is 30% of the auto-assign score	Remove entirely, or count at a stated fraction	Operations manager	Before UAT	☐
19	Q5 · Next year's term letter uploaded in December	§4.2 expires every term letter on 31 December, which would kill a letter uploaded in answer to the 1 December reminder	One-line answer	Compliance manager	Before UAT	☐
20	Q6 · N14 wording for workers with no end date	§4.4 gives N14 as “... until [date]”, but a graduate or an opted-out worker has no date	Approve, or replacement wording	Compliance manager / whoever owns worker communications	Before UAT	☐
21	Acknowledge: PWA instead of Flutter; background tracking A or B	The Scope fixed Flutter for the background geofence (§1.3, §5.1); THC chose a PWA on 18.09.2026	A signed line: PWA acknowledged; tracking Option A or B	Director	With this document	☐
22	Acknowledge: Supabase + Vercel instead of Django	The Scope fixed Django/DRF (§1.3) and DigitalOcean or AWS (§1.1); the build runs on Supabase and Vercel	A signed line	Director	With this document	☐
23	Acknowledge: the visual direction (one rounded look, light and dark)	The design pack's §1.6 rendering is marked STRICT; the shipped look follows the design boards supplied on 21.09.2026	A signed line	Director / whoever owns the brand	With this document	☐

Part 1 · Appendix B inputs: keys and content

1 Willo: API key, interview key and stage mapping

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
UAT – 2 weeks	Whoever administers THC's Willo account, with Willo support	Three secret values + the stage list; secrets by password manager or on a call	☐

WHAT WE NEED, EXACTLY

- **Willo API key** — the secret key from THC's Willo account (Settings, Integrations or API). It lets the platform create each applicant in Willo the moment they submit the application form.
- **Interview key** — the identifier of the Willo interview every applicant is invited to (the one interview THC uses for recruitment).
- **Webhook signing secret** — the secret Willo shows when a webhook is created in THC's account, so the platform can tell a genuine Willo message from a forged one. If Willo asks you to type one rather than issuing it, tell us and we will supply one.
- **Stage mapping** — the names of the stages in THC's Willo pipeline, spelt exactly as Willo shows them, and which of the platform's stages each one means: Interview requested, Interview completed, Accepted (moves to Documents) or Rejected. The default in place today is: "New Response" = Interview completed · "Accepted" = Documents · "Rejected" = Rejected.
- **The review link format** — the web address that opens one candidate's interview in Willo, for the "Review interview on Willo" button on the candidate profile.
- **Answers from Willo** to the six questions below — or a link to Willo's API and webhook documentation and a named contact at Willo, and we will find the answers ourselves.

In return we give you the **webhook address** to paste into Willo. It has the form

`https://<project-id>.supabase.co/functions/v1/willo-webhook` — one for staging now, one for production once item 8 is decided.

SIX QUESTIONS FOR WILLO

The connection was built without access to THC's Willo account, on sensible assumptions. Every assumption is a setting, not code, so the answers change configuration rather than needing a release — but we do need the answers.

- How are webhook deliveries signed? Which header carries the signature (we assume x-willo-signature), which algorithm (we assume HMAC-SHA256 over the raw message body), hex or base64 — and is there a timestamp header for replay protection?
- What does a delivery look like? Where in the message are the event type, the candidate's key, the stage name and the time? (We read the usual places: event or type; data.candidate.key; data.stage.name; created_at.)
- How is a candidate created by API? The address (we assume POST `.../interviews/{interviewKey}/candidates/`), the authentication (we assume Authorization: Bearer <API key>), the fields (first name, last name, email, phone, an external reference, "send invite") and where the new candidate's key comes back in the reply.
- If the same person is created twice, does Willo de-duplicate by email address?
- Is there a sandbox or test interview where we can send test deliveries before going live?
- Does THC's Willo plan include API and webhook access? Some plans do not.

WHY THE PLATFORM NEEDS IT

The candidate submits the form; the platform creates them in Willo and Willo sends the interview invitation. The moment the interview is finished, Willo tells the platform and the card moves to “Interview completed” by itself; the decision the manager makes inside Willo moves it again — no manual updating and no repeating the decision in the system (§2.4). The keys are held as secure configuration, never in the code, and the stage mapping is editable on the Settings page so a change to your Willo pipeline needs no release (§2.4, Appendix B1).

FORMAT AND EXAMPLE

The API key, interview key and signing secret are long strings of letters and numbers copied from Willo’s settings pages. The stage mapping is a short list, for example: “New Response = Interview completed; Shortlisted = Interview completed; Accepted = Documents; Rejected = Rejected”.

HOW TO SEND IT

Keys and secrets never by email or messaging app: an email is copied to several servers and mailboxes on its way, is kept in Sent folders and backups, and a key that sits in an inbox is a key that can be found later. Use a password-manager share (1Password, Bitwarden or similar), or read it out on a call and we type it straight into the secure configuration.

The stage list, the review-link format and Willo’s answers are not secret and can come by email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

The application form works and every applicant is saved under “Interview requested”. No Willo invitation goes out and no card moves on its own; the office can move a candidate on by hand from the candidate profile. Once the keys are in, every applicant still waiting is created in Willo automatically on the first run — nothing is re-typed. Until the signing secret exists every webhook delivery is refused, so nothing forged can get in meanwhile.

2 The zero-hours contract text

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
UAT – 2 weeks	HR lead or director, with THC’s employment solicitor	Word or PDF, final, with a version label and date	☐

WHAT WE NEED, EXACTLY

- The full text of the zero-hours agreement a worker signs in the app — final, approved by THC and, if you use one, your employment solicitor — with a version label and date (for example “v1 — October 2026”).
- It must contain the **ongoing duty to disclose**: the worker undertakes to declare any unspent criminal conviction that arises during their employment, as soon as reasonably practicable, through the declaration route in the app (§2.11). The platform will not publish a version that does not contain the words “unspent criminal conviction”. That clause is what lets the app’s own “Declare a criminal conviction” screen point back to something the worker has already agreed to (§10.7).
- Written to read on a phone: headings and numbered clauses, no tables, no images, nothing to fill in by hand. Ticking “I agree” is the signature and its timestamp is the record (§2.11) — there is no name box or signature line.

WHY THE PLATFORM NEEDS IT

The agreement is stored as versioned text. Each worker’s record says which version they signed and when, and a published version can never be edited — a change is a new version, and the workers who signed the old one still point at the old one. That is what makes the electronic signature evidence of anything (§2.11). Every worker signs it at step 10 of the 11-step onboarding, and signing is the moment they become compliant and receive their Employee ID (§2.7).

FORMAT AND EXAMPLE

Word or PDF. If the contract exists in Accelerate or on paper today, send that and mark any changes. The clause the platform insists on, as worded in today's placeholder:

5. Ongoing duty to disclose convictions. You confirm that the criminal-conviction declaration you made during onboarding is accurate, and you undertake to declare any unspent criminal conviction that arises during your engagement, as soon as reasonably practicable, using the "Declare a criminal conviction" route in the app. The Company may pause your assignments while such a declaration is reviewed.

HOW TO SEND IT

Email or shared drive — the text is not personal data.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

The app shows a draft written by the build team, titled "Casual worker agreement — The Hospitality Company Ltd" (version placeholder-2026-09), and the step tells the worker it is a placeholder. Anyone who signs during testing signs that draft. Because every signature records its version, your text goes in as a new version and nothing already signed is rewritten. The draft in full, so you can approve it or replace it:

1. Status. This is a zero-hours agreement. The Company is under no obligation to offer you work and you are under no obligation to accept any work offered. Each assignment you accept is a separate engagement.
2. Pay. You are paid at the base hourly rate shown for each shift, calculated on the payable time recorded through the app (check-in to check-out within the scheduled shift, less unpaid breaks where the client does not pay for breaks). Holiday pay is accrued and paid in accordance with the Working Time Regulations. Pay is made on the Friday following the Mon-Sun week worked.
3. Confirmations and attendance. You agree to confirm each accepted shift the day before by 12:00, to check in and out on site using the app, and that a confirmed shift not re-confirmed by that deadline may be reallocated.
4. Right to work. You confirm the right-to-work information and documents you have supplied are true and complete, and you will supply renewed documents before they expire.
5. Ongoing duty to disclose convictions. You confirm that the criminal-conviction declaration you made during onboarding is accurate, and you undertake to declare any unspent criminal conviction that arises during your engagement, as soon as reasonably practicable, using the "Declare a criminal conviction" route in the app. The Company may pause your assignments while such a declaration is reviewed.
6. Conduct on site. You will follow the client's reasonable instructions, the dress code for the shift and the Health & Safety induction you have completed.
7. Data. Your personal data, including your location while checked in to a shift, is processed as described in the Privacy Notice.
8. Ending the agreement. Either party may end this agreement at any time; you may do so from the app ("Request my P45").

3 Sample University Term Dates Letters and Official University Completion Letters

NEEDED BY
UAT – 3 weeks

WHO AT THC
Onboarding / compliance
manager

FORMAT WANTED
PDF or JPG, 3-5 of each,
personal data blacked out

STATUS
☐

WHAT WE NEED, EXACTLY

- 3-5 **University Term Dates Letters** and 3-5 **Official University Completion Letters**, as students actually send them: a PDF from the university portal, a photo taken on a phone, an email printed to PDF. From different universities where possible.

- Personal data blacked out — the student’s name, student number, address and date of birth. Keep the university’s name and logo, every date and the layout untouched: those are what the reader learns from.
- If you have them, one or two examples of the wrong document a student sends instead (an offer letter, an enrolment certificate), so the reader learns to say “this is not a term dates letter”.
- For each letter, a line on what a manager would take from it: the term and holiday ranges, or the course completion date and the awarding institution.

WHY THE PLATFORM NEEDS IT

The platform reads every uploaded document to lift the expiry date onto the worker’s profile; from the term dates letter it lifts the term and holiday ranges, and from the completion letter the completion date and the institution (§2.6, §4.5). Those dates drive the weekly hours limit for student-visa workers — 20 hours in term, 48 in the holidays, 48 permanently once a completion letter is verified — which is calculated from the verified letter and never typed by anyone (§4.4, §4.5). A manager always checks the document; the reader only pre-fills. Built against real layouts it pre-fills correctly more often (Appendix B3).

FORMAT AND EXAMPLE

PDF or JPG, one file per letter, named so they sort: term-letter-01-UCL.pdf, completion-letter-01-KCL.pdf. Redact with a solid black box, not a highlighter — a scan reads straight through a highlighter.

HOW TO SEND IT

Email or a shared drive folder — once redacted they hold no personal data. If redacting is awkward, put the originals in a shared folder restricted to the build team and we will redact and return them. Do not email unredacted letters.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

The reader is tested against made-up letters written by the build team. On a real one it may be less sure of itself, and a low-confidence reading is flagged “needs manual review” rather than written to the profile (§2.6) — the manager then types the dates. Nothing is verified without a manager, so the cost of waiting is extra manual work, never a wrong limit.

4 Hi-res logo (SVG and PNG)

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Received	Marketing / brand owner	Received — nothing further unless the logo changes	Done

WHAT WE NEED, EXACTLY

Nothing further. THC’s stacked logo (THC-Stacked-logo.svg) was received and is the source of record. From it the build team cut the mark (the two glasses and the cork) and the stacked lockup, and generated every size the applications need: the Staff App’s home-screen icons in all three sizes, its iOS icon, and a browser-tab icon for all three applications. The mark appears on every sign-in card, in the Back Office sidebar, in the Client Portal header and on the printed timesheet.

- Optional: if a **mark-only original** exists — the glasses and cork drawn on their own rather than as part of the stacked logo — send it and we regenerate from that. The mark in use was cut out of the stacked file, which is sound, but a future change to the lockup would have to be traced through again.
- If the logo ever changes, send the new master file and every size is regenerated from it. Please do not send resized copies: several of the files have exact names and padding the code expects.

WHY THE PLATFORM NEEDS IT

The brand is fixed at one name and one logo across the whole system; colours and fonts are already specified (\$1.6).

FORMAT AND EXAMPLE

SVG preferred. Otherwise PNG at 1024 by 1024 pixels or larger on a transparent background.

HOW TO SEND IT

Email or shared drive.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Not applicable — done.

Part 2 · Appendix B inputs: data, DNS and hosting

5 Old-system export: workers and clients

NEEDED BY Go-live – 4 weeks	WHO AT THC Whoever administers Accelerate, with the office manager	FORMAT WANTED CSV (UTF-8, header row), one file per table, columns as proposed	STATUS ☐
--------------------------------	---	---	------------------------------------

WHAT WE NEED, EXACTLY

Two spreadsheets exported from Accelerate — **workers** and **clients** — one row per record, saved as CSV. Three optional extras make the migration complete: client rate cards, venues, and each worker's documents with their expiry dates. The columns below are a proposal from the platform's data model (§1.5). If Accelerate cannot produce a column, leave it out and say so — please do not invent values.

Workers — one row per worker

Column	Required	Notes
old_id	Yes	Accelerate's own reference. Kept as a cross-reference and used to name photo and document files.
first_name, last_name	Yes	
email	Yes	One per worker and unique: it becomes their login.
phone	Yes	International format, e.g. +44 7700 900123.
date_of_birth	Yes	YYYY-MM-DD. Under-18s cannot be migrated (§1.7).
address_line_1, address_line_2, town, postcode	Yes	Turned into a map position for the proximity part of auto-assign.
roles	Yes	Separated by semicolons, spelt as in your role list, e.g. Waiting Staff; Bar Staff.
status	Yes	active / inactive / left. Decides who is migrated as a live worker.
start_date	No	First shift or onboarding date, YYYY-MM-DD.
rtw_branch	Yes	One of the five right-to-work branches (§2.5): UK/Irish citizen · EU settled or pre-settled · Work visa · International student · Dependant/other visa.
rtw_expiry	Visa branches	YYYY-MM-DD. In date = arrives compliant; expired = arrives blocked and is asked to re-upload (§4.3).
share_code	No	If held: 9 characters starting with W.
ni_number	No	
term_dates	Students	The holiday ranges from the verified term dates letter, e.g. 2026-12-12..2027-01-10; 2027-03-27..2027-04-25.
completion_date	Students	If a completion letter has been verified: the course completion date.
wtr_optout_signed	No	Yes/No and the date the 48-hour opt-out was signed.
client_qualifications	No	Client: role pairs, e.g. Client A: Waiting Staff; Client A: Bar Staff (§9.6).
do_not_return	No	Clients this worker must not be sent to.

rating, show_rate	No	If Accelerate holds them; otherwise they start fresh.
photo_filename	No	With a folder of photos named by old_id.
notes	No	Internal notes on the worker.

Not by spreadsheet: bank details and HMRC New Starter answers. Each worker confirms them once in the app, where they are stored encrypted. If you want them carried over, say so and we agree a separate encrypted transfer — never by email.

Clients — one row per client

Column	Required	Notes
old_id	Yes	Accelerate's reference.
name	Yes	As it should appear on timesheets and in the Client Portal.
contact_name, contact_email, contact_phone	Yes	The main contact; the email becomes their Client Portal login.
default_onsite_contact_name, default_onsite_contact_phone	No	Pre-fills the on-site contact on every event for that client.
breaks_paid	No	Yes/No — whether this client pays for breaks (RULE-14).
buffer_policy	No	strict / flexible (§3.2).
notes	No	

Optional extra tables

- **client_rate_cards** — client_old_id · role · charge_rate (£ per hour) · dress_code (§1.5).
- **venues** — name · address · postcode · venue_type · geofence_radius_m (§9.11). The platform places them on the map from the address.
- **worker_documents** — worker_old_id · doc_type (passport / visa / term_letter / completion_letter / share_code_report / ni_evidence) · expiry_date · filename, with the files in a folder.

WHY THE PLATFORM NEEDS IT

Migration is a one-off import, run against staging first and then production (Appendix B5). Migrated workers arrive as compliant where their documents are in date and blocked where they are not, and the blocked ones are notified to re-upload (§4.3) — so the expiry dates are the columns that matter most, and a worker with no documents at all arrives blocked rather than trusted.

FORMAT AND EXAMPLE

CSV, UTF-8, one header row, dates as YYYY-MM-DD, one file per table. Excel is fine if CSV is awkward — we convert. A sample of five rows first lets us check the columns before you export everything.

HOW TO SEND IT

This is the personal data of around a thousand people. Not by email. A shared drive folder restricted to the build team (Google Drive, OneDrive or SharePoint), or an encrypted archive with the password given separately by phone.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Staging holds sample data only. The import script is written against the columns above and adjusted to what Accelerate actually produces once the sample rows arrive.

6 Sign-off on the migration dry run

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Go-live – 2 weeks	Office manager, countersigned by a director	Email: “signed off”, with corrections listed	☐

WHAT WE NEED, EXACTLY

After the build team runs the import on staging, THC checks a sample and confirms in writing — an email is fine — that the migrated data is right, listing any corrections. A suggested sample: 20 workers across the statuses (compliant, blocked, inactive, students, visa holders) and 5 clients with their rate cards. For each, check:

- Name, email, phone and address.
- Roles, and the client qualifications and do-not-return flags.
- Status — compliant or blocked — and the reason the profile gives for a block.
- Each document’s expiry date.
- For students: the term dates and the weekly limit the profile shows.
- Client contacts, rate cards, dress codes, and the venues on the map.

WHY THE PLATFORM NEEDS IT

The import is run against staging and THC checks a sample before it is run for real (Appendix B6). Once it runs on production, blocked workers are notified to re-upload (§4.3) and the platform is live for every migrated worker — so this is the last point at which a wrong column is cheap to fix.

FORMAT AND EXAMPLE

An email: “Signed off”, plus a list of corrections as worker reference · field · expected value.

HOW TO SEND IT

Email. The corrections should quote references, not personal data.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Go-live cannot be scheduled. The production import runs only after the sign-off.

7 DNS records for admin@ and timesheets@

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
UAT – 2 weeks	Whoever manages the thehospitalitycompany.co.uk domain — IT provider, web agency or the registrar login	Records added at THC’s DNS host; reply when done	☐

WHAT WE NEED, EXACTLY

Someone with access to where **thehospitalitycompany.co.uk** is managed (the domain registrar, your IT provider or your web agency) to add the records that Resend — the email service the platform sends through — issues for the domain. In plain terms, SPF, DKIM and DMARC are the three records that tell Gmail and Outlook the platform is allowed to send email on THC’s behalf. The records are:

Record	Where	What it does

DKIM — a TXT record (sometimes two)	resend._domainkey.thehospitalitycompany.co.uk	Signs every email so the receiving server can prove it came from THC and was not altered.
SPF — an MX record and a TXT record	send.thehospitalitycompany.co.uk — a sending subdomain, so your existing email is untouched	Says Resend is allowed to send for that subdomain and handles bounces.
DMARC — a TXT record	_dmarc.thehospitalitycompany.co.uk	Tells receivers what to do with mail that fails the checks. Starts in monitor-only mode (p=none).

- The exact names and values come from Resend and we send them to you — they are not secret. If THC already has a DMARC record, tell us before anything is added.
- Confirmation that **admin@thehospitalitycompany.co.uk** and **timesheets@thehospitalitycompany.co.uk** exist as real, monitored mailboxes. Replies to the platform’s emails go there; no-reply addresses are not used (§9.12).

WHY THE PLATFORM NEEDS IT

All outgoing mail is sent from two addresses and no others: timesheets@ for allocation sheets and timesheets, admin@ for everything else — activation, password resets, invitations, finance reports (§9.12). Without these records a receiving mail server cannot tell the platform’s email from a forgery, and files it as spam or rejects it outright (Appendix B7). The records live with whoever manages your domain, and changes take up to 48 hours to spread — which is why this is the first item on the lead-time list.

FORMAT AND EXAMPLE

We email you the records; you add them at the DNS host and reply “done”; we press Verify in Resend and the two senders come alive. Alternatively, give your DNS person a login to Resend and they read the records there directly.

HOW TO SEND IT

Email — none of this is secret.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Every email the platform wants to send waits in its queue marked “not configured” — activation links, reminders, timesheets, finance reports. Nothing is lost; it all sends once the domain shows Verified. Push notifications to the app do not depend on this.

8 Production hosting: the accounts THC owns

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Before UAT	Director / finance — the account owner and card holder	Email: the owning email address for each account and the administrator; then accept invitations	☐

WHAT WE NEED, EXACTLY

- A decision on where production lives, and the accounts to put it in. The Scope said DigitalOcean or AWS at THC’s discretion (§1.1); under the agreed change (item 22) the platform runs on **Supabase** (the database, file storage and background jobs) and **Vercel** (the three web applications), so the decision is now: which Supabase organisation and which Vercel team THC owns.

- Our recommendation: THC creates both under a THC role address (admin@ rather than one person's mailbox) with THC's payment card, and invites the build team in as members. The production accounts are then THC's from day one and nothing has to be transferred later.
- The Supabase project must be in the **London region (eu-west-2)**: the database holds UK payroll and right-to-work data.
- The same for the code: a **GitHub** organisation owned by THC, to receive the repository at hand-over (§1.1: "the code is transferred to THC in full").
- Tell us the owning email address for each of the three, who at THC will be the administrator, and whether THC wants its own web addresses for the three applications (for example office., app. and clients. under thehospitalitycompany.co.uk) — that adds three more DNS records to item 7 and they should be in place before UAT if testers are to use the final addresses.

WHY THE PLATFORM NEEDS IT

Production runs in THC's own account and the code is transferred in full (§1.1). The Staff App must be served over a secure connection on a real domain for it to be installable on a phone and to receive push notifications. Hosting on Supabase and Vercel is a monthly subscription rather than servers to look after; both have a paid tier suited to this size of business and we will confirm current prices on request.

FORMAT AND EXAMPLE

An email with the three owning addresses and the administrator's name. Access is then by invitation in each service — no passwords change hands.

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Everything runs on the build team's staging accounts: a Supabase project in London and three Vercel projects. UAT can start on staging; go-live cannot happen without the production accounts.

Part 3 · Content and wording sign-off

9 Health & Safety quiz — the questions and answers

NEEDED BY
UAT – 2 weeks

WHO AT THC
H&S trainer — the author
of “Health and Safety
Presentation Questions”

FORMAT WANTED
Word or Excel: question, four
options, the correct one

STATUS
☐

WHAT WE NEED, EXACTLY

THC’s own **“Health and Safety Presentation Questions”**: ten questions, each with four answer options and exactly one correct answer, in the order they should appear. The number can differ from ten — the rules do not depend on it — but ten is what the design shows (“Question 4 of 10”).

WHY THE PLATFORM NEEDS IT

The quiz is step 6 of the 11-step onboarding and opens only once every document is verified. Pass mark 80%, multiple choice, three attempts in total; failing the third rejects the candidate automatically and sends them email E4 (§2.9). The pass mark and the questions come from THC’s own document, which the build team does not hold. The answer key never leaves the server, so a candidate cannot pass by reading the page.

FORMAT AND EXAMPLE

A table, one row per question:

#	Question	Options A–D	Correct
1	You discover a small fire in the kitchen. What should you do first?	A. Try to put it out with water · B. Raise the alarm and alert the people around you · C. Finish the service you’re on, then report it · D. Open the windows to let the smoke out	B

HOW TO SEND IT

Email or shared drive, together with the induction deck (item 10) so the two match.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Ten placeholder questions written by the build team from the placeholder induction slides, marked as placeholders in the database. Replacing them is a data change, not a release. If you are content with these, say so and the placeholder flag is removed. They are:

- **1. You discover a small fire in the kitchen. What should you do first?**
 - A. Try to put it out with water
 - B. Raise the alarm and alert the people around you (correct)
 - C. Finish the service you're on, then report it
 - D. Open the windows to let the smoke out
- **2. The fire alarm sounds during an event. Where do you go?**
 - A. To the assembly point given in the venue briefing (correct)
 - B. Back to the staff area for your belongings
 - C. To the nearest lift
 - D. Wherever the guests seem to be going
- **3. A guest slips on a wet floor but says they are fine. What do you do?**

- A. Nothing — they said they're fine
- B. Ask them to sign something saying so
- C. Mop the floor and carry on
- D. Tell your supervisor so it is recorded, and make the area safe (correct)
- **4. How should you lift a heavy crate of glassware?**
- A. Bend your back and lift quickly
- B. Lift it above your head to clear the guests
- C. Bend your knees, keep the load close and lift with your legs (correct)
- D. Drag it along the floor with one hand
- **5. You spot a spill on the floor during service. What do you do?**
- A. Walk around it
- B. Put out a wet-floor sign and get it cleaned straight away (correct)
- C. Warn one guest and carry on
- D. Leave it for the cleaners at the end of the night
- **6. A guest asks whether a dish contains nuts and you are not sure. What do you say?**
- A. That it probably doesn't
- B. That they should pick something else
- C. That you will check the allergen information with the kitchen before they order (correct)
- D. That another guest had it and was fine
- **7. You cut your hand on broken glass. What do you do?**
- A. Get it seen by the first aider and tell your supervisor (correct)
- B. Wrap it in a napkin and keep serving
- C. Carry on and deal with it after the shift
- D. Leave the event without telling anyone
- **8. Which of these must you never do with a cleaning chemical?**
- A. Read the label first
- B. Wear gloves when the label says to
- C. Put it back where it is stored
- D. Mix it with another product (correct)
- **9. A fire exit is blocked by stacked chairs. What do you do?**
- A. Leave it — it is only for emergencies
- B. Clear it or report it straight away (correct)
- C. Put a sign on the chairs
- D. Wait until the event is over
- **10. Who do you report an accident or a near miss to?**
- A. Nobody, if no one was hurt
- B. Only the client
- C. Your supervisor or the THC manager on site (correct)
- D. The other staff on your shift

10 Health & Safety induction slides

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
UAT – 2 weeks	H&S trainer	PDF (or PowerPoint), one page per slide	☐

WHAT WE NEED, EXACTLY

The Health & Safety induction deck the worker reads before the quiz — final, as a PDF (or PowerPoint, which we convert). Each page becomes one slide in the app’s built-in viewer, shown exactly as supplied. Large type and one idea per page read best on a phone.

WHY THE PLATFORM NEEDS IT

Step 5 of 11: reaching the last slide is what unlocks the quiz (§10.3). The deck is used as-is; re-drawing its content as app screens is out of scope for v1 (decided 17.07.2026, after the supplied deck was checked on a phone and confirmed legible). The quiz questions must be answerable from the deck, so please send both together.

FORMAT AND EXAMPLE

PDF, landscape 16:9 or portrait, under 10 MB. Page 1 is slide 1.

HOW TO SEND IT

Email or shared drive.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Ten short stand-in slides written by the build team, and the screen says they are placeholders. Their titles:

- Section 1 · Welcome — Why health and safety matters at our events
- Section 1 · Welcome — Your responsibilities
- Section 2 · Fire safety — If you discover a fire
- Section 2 · Fire safety — Evacuation
- Section 3 · Slips, trips and lifting — Spills and walkways
- Section 3 · Slips, trips and lifting — Lifting safely
- Section 4 · Food and allergens — Allergen questions
- Section 5 · Hazardous substances — Cleaning chemicals
- Section 6 · Accidents — First aid and reporting
- Section 6 · Accidents — Before you start the quiz

11 Wording sign-off: E2b, the rejection email after the interview stage

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Before UAT	Office manager / recruitment lead	“Approved”, or the replacement text	☐

WHAT WE NEED, EXACTLY

Approve, or replace, the wording of one email the Scope’s register did not foresee. §8 has one rejection email, E2, in THC’s own words:

E2 — subject “Your application to The Hospitality Company” — sent by the platform on an interview-stage rejection, whichever route

Thank you for taking the time to complete your interview with The Hospitality Company. On this occasion we will not be taking your application further. We wish you the very best.

It says “complete your interview”. The onboarding board also lets the office reject a candidate **after** the interview — at Documents, Quiz or Additional info — and decline a returning applicant who has not been interviewed this time round (§2.3, §2.12). For them that first sentence is untrue, and it is the only thing the candidate is told. So the platform sends them E2b instead:

E2b — same subject — sent on a rejection after the interview stage, or when a returning applicant is declined

Thank you for the time you have given to your application with The Hospitality Company. On this occasion we will not be taking your application further. We wish you the very best.

Like E2, E2b never carries the office’s reason. If you would rather one email for every stage, we set E2b’s text to E2’s and nothing else changes.

WHY THE PLATFORM NEEDS IT

One truthful email per rejection route (§2.7, §8). E2 is unchanged and still goes for every interview-stage rejection.

FORMAT AND EXAMPLE

A reply: “E2b approved”, or the replacement wording.

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

E2b goes out as quoted, once email sending is switched on (item 7).

12 Wording sign-off: CL1–CL6, the completion-letter and hours-limit messages

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Before UAT	Office manager / compliance manager	“Approved” or replacement text, plus the list of mandatory ones	☐

WHAT WE NEED, EXACTLY

Approve, or replace, six messages that come from THC’s later University Completion Letter requirement rather than from the Scope’s §8 register, and tell us **which of them are mandatory**. Mandatory means a message that always goes and that the worker cannot switch off in their notification preferences — in §8 only the activation email E3 is mandatory. Words in {braces} are filled in by the platform.

CL1 — push to the worker, title “Completion letter received” — on upload

We’ve received your completion letter. Your weekly hours stay the same until the office has checked it.

CL2 — push to the worker, title “Completion letter approved” — on approval, one of three forms

Approved with a date: Your completion letter is approved — your weekly limit is {limit} hours from {date}.

Approved, opt-out in force: Your completion letter is approved — from {date} you have no weekly hours limit.

Approved, but the visa ends first: Your completion letter is approved, but your right to work ends on {date}, before the new limit would start — your weekly hours do not change.

CL3 — email to admin@, subject “Completion letter awaiting review — {name}, Employee ID {employeeId}” — on upload

Name: {name}

Employee ID: {employeeId}

Uploaded: {uploadedAt}

Document: {form}

Course completion date entered by the worker: {completionDate}

Review it in Compliance, Needs review. The worker’s weekly hours do not change until it is approved.

CL4 — email to admin@, subject “Right to work expires in {days} days — {name}, Employee ID {employeeId}” — 60, 30 and 14 days before

Name: {name}

Employee ID: {employeeId}

Right to work: {route}

Expires: {visaExpiry} ({days} days)

No shift after that date can be rostered, and they are blocked on the day unless a new right-to-work check is recorded.

CL5 — email to admin@, subject “48-hour opt-out signed — {name}, Employee ID {employeeId}” — on signature

Name: {name}

Employee ID: {employeeId}

Signed: {signedAt} ({signedCopy})

Notice period to cancel: {noticeDays} days

This lifts the 48-hour weekly limit. It does not lift a Student visa term-time limit.

CL6 — email to admin@, subject “48-hour opt-out cancelled — {name}, Employee ID {employeeId}” — on notice

Name: {name}

Employee ID: {employeeId}

Notice given: {cancelledAt}

The 48-hour weekly limit applies again from: {effectiveFrom}

Weeks already booked above 48 hours from then: {overCapWeeks}

WHY THE PLATFORM NEEDS IT

The requirement lists these sends (\$5 of the University Completion Letter requirement); the platform holds their copy in one register so any of it can be changed in one place. A rejected completion letter is not here — it uses the standard “document rejected” push N8 with the reason and a Re-upload button, as \$4.5 asks.

FORMAT AND EXAMPLE

A reply per message: approved, or the replacement text; and the list of the ones that are mandatory.

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

They send as quoted once email and push are switched on, and none is treated as mandatory.

13 Privacy notice: the legal text for /privacy

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Before go-live; ideally before UAT	Data protection lead / solicitor	Word or PDF, final legal text	☐

WHAT WE NEED, EXACTLY

The legal privacy notice for applicants and workers, from THC or its solicitor, to replace the page at /privacy – the page the application form links to before the consent tick (§1.7, §2.1), and that the sign-in pages of all three applications link to.

It should cover at least: who the controller is and how to contact them; the lawful basis for each use; what is collected at application, during onboarding and while working – including the worker’s location while checked in to a shift; who it is shared with and where it goes (Willo for interviews, Google Gemini for reading documents, Resend for email, Supabase and Vercel for hosting – all under contract); retention, including right-to-work evidence for the length of employment plus two years; the worker’s rights and how to complain to the ICO.

WHY THE PLATFORM NEEDS IT

Consent on the application form is only meaningful against a notice that says what actually happens (§1.7). The current page describes what the platform does, but it is not a solicitor’s notice.

FORMAT AND EXAMPLE

Word or PDF, final. The current page is a factual summary of what the platform actually does, written from the Scope with the source section noted against every point – it can go to the solicitor as the basis for the real notice.

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

The placeholder is live. It is headed “How we use your personal data” with the sections **What we hold · Who can see it · How long we keep it · Having your data removed · Contact**, and carries the note: “This is a summary. THC’s full legal privacy notice will replace this page.” It names no lawful bases, no controller details and no ICO route.

Part 4 · Decisions and product questions

14 Decision: keep other right-to-work evidence for employment + 2 years after a removal?

NEEDED BY
Before go-live

WHO AT THC
Data protection lead / HR

FORMAT WANTED
Yes / No, with a line on why

STATUS
☐

WHAT WE NEED, EXACTLY

A yes or no: when a worker asks to be removed under GDPR, should the platform keep their **other** right-to-work evidence — passport copy, visa, share-code report, National Insurance evidence — for the length of their employment plus two years, the way it already keeps the University Completion Letter?

Background. THC's completion-letter requirement says that letter is retained for the duration of employment plus two years, in line with right-to-work evidence retention. The Scope's removal rule says contacts, documents and photo are wiped (§1.7). Where the two met, the build took the legal-obligation reading for the completion letter only: on removal the worker is anonymised to "Deleted account #id" and everything else is deleted, but the completion letter is held until two years after employment ended and is then deleted automatically, with an audit entry. Whether the same argument should hold passports, visas and share-code reports is a wider decision about §1.7 that the build did not make.

WHY THE PLATFORM NEEDS IT

An employer is expected to be able to produce right-to-work evidence for two years after employment ends; a removal that wipes it removes that protection. Against that, holding more of a removed person's data than the law requires is exactly what GDPR guards against. This is THC's call, or its solicitor's.

FORMAT AND EXAMPLE

"Yes — hold all right-to-work evidence the same way" or "No — completion letter only, as today", with a line on why, so the privacy notice (item 13) can say the same thing.

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Completion letter held; everything else wiped at removal. The placeholder privacy notice says so.

15 Question: a replacement who arrives late to a full shift

NEEDED BY
Before UAT

WHO AT THC
Operations manager, with payroll

FORMAT WANTED
One-line answer

STATUS
☐

THE QUESTION

Ask

if we pull in a replacement after a shift has started and the shift is full by the time they arrive, should they be paid the four-hour turn-away — or nothing, because they arrived more than 30 minutes after the original start time?

WHAT THE PLATFORM DOES TODAY

Implemented exactly as the scope reads: RULE-15 measures from the scheduled start for everyone, with no exemption — so the replacement is “late” and paid nothing.

THE ALTERNATIVE

Measure a post-start confirmation’s promptness from the moment they were confirmed, not from the scheduled start — so the replacement above would be “on time” and paid the four hours. A small change, and safer to make now than after the first real turn-away.

WHERE IT COMES FROM

§5.1 (the No-show lock) against RULE-15 (buffer turn-away pay); §3.4 (the buffer-exhausted escalation).

16 Question: a break the worker forgets to end

NEEDED BY
Before UAT

WHO AT THC
Payroll

FORMAT WANTED
One of three options

STATUS
☐

THE QUESTION

Ask

if a worker starts a break and never presses “Finish break”, should we deduct the time up to their check-out, ignore it, or deduct a fixed amount — say the 20 minutes UK law requires on a shift over six hours?

WHAT THE PLATFORM DOES TODAY

The break runs to the recorded finish, so the whole of it is deducted; the four-hour minimum still protects the floor, the manager sees it in the Breaks column, and check-out closes the break so it stops reading as “still on break”.

THE ALTERNATIVE

Ignore a break with no end and pay the time, or deduct a fixed amount. Neither is obviously right: deducting charges a worker for a button they did not press; ignoring pays for a break they did take. The current choice is the one that does not bill the client for time nobody worked.

WHERE IT COMES FROM

§5.2b (breaks); RULE-14 (the four-hour minimum).

17 Question: “Get back” long after the shift has ended

NEEDED BY
Before UAT

WHO AT THC
Operations manager

FORMAT WANTED
One-line answer

STATUS
☐

THE QUESTION

Ask

when a manager clears a No-show after the shift has finished, should we ask them what time the worker actually turned up — or is it enough to record it as the moment they pressed the button?

WHAT THE PLATFORM DOES TODAY

The press time is taken at face value, as written. Pressed the next morning it records an arrival after the shift ended, and in practice the four-hour minimum means such a worker is paid four hours.

THE ALTERNATIVE

Once the shift has ended, refuse the one-press reclassification and ask the manager for the actual arrival time — the way “Actual finish (UK time)” is already asked for when a No check-out is resolved.

WHERE IT COMES FROM

§3.3 and §9.5 (Get back / Resolve); RULE-01 (the pay window).

18 Question: what “Resolve” does to the show-rate

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Before UAT	Operations manager	Remove entirely, or count at a stated fraction	☐

THE QUESTION

Ask

once a manager resolves a violation with a note, should it stop counting against that worker’s reliability score completely, or still count — and if so, by how much?

WHAT THE PLATFORM DOES TODAY

Nothing depends on it yet: the nightly job that computes the show-rate has not been written, so the answer is wanted before it is, not after.

THE ALTERNATIVE

Removes and reduces are different numbers. A resolved No-show that still counts at half weight ranks a worker differently in auto-assign from one that does not count at all.

WHERE IT COMES FROM

§9.5 (violations and Resolve); §6 (the auto-assign score: show-rate 30%).

19 Question: a term dates letter that arrives for next year, in December

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
Before UAT	Compliance manager	One-line answer	☐

THE QUESTION

Ask

if a student uploads next year’s term dates letter in December, in answer to the reminder you just sent them, should it cover the year ahead (what we do), or expire on the 31st a few weeks later?

WHAT THE PLATFORM DOES TODAY

A letter uploaded in November or December runs to the following 31 December; every other letter expires on the 31 December of the year it was uploaded. The letter’s own printed dates are never used to decide its expiry.

THE ALTERNATIVE

The literal reading: every letter expires on the 31 December of the year it was uploaded — which blocks on 1 January the student who did exactly what the reminder asked, and releases every future shift they hold.

WHERE IT COMES FROM

§4.2 (term letter expiry and the reminder ladder); §4.3 (the automatic block).

20 Question: the wording of the “your weekly limit has changed” push (N14)

NEEDED BY Before UAT	WHO AT THC Compliance manager / whoever owns worker communications	FORMAT WANTED Approve, or replacement wording	STATUS ☐
-------------------------	---	---	------------------------------------

THE QUESTION

Ask

for a worker with no end date — graduated, or opted out — is dropping the “until ...” clause right, or should it read something like “until further notice”? And is “You no longer have a weekly hours limit” the wording you want for the opt-out?

WHAT THE PLATFORM DOES TODAY

N14 is sent in one of three forms — dated: “Your weekly limit is now {limit} hours — {band} until {date}.” · open: “Your weekly limit is now {limit} hours — {band}.” · uncapped: “You no longer have a weekly hours limit — {band}.” The band reaches the worker as words (“term time”, “university holiday”).

THE ALTERNATIVE

One sentence with optional clauses, which would send “Your weekly limit is now no hours” to somebody who has just removed their ceiling — the opposite of what happened.

WHERE IT COMES FROM

§4.4 (N14); §8 (the push register).

Part 5 · Agreed changes to acknowledge

21 Acknowledge: the Staff App is a web app (PWA), not Flutter — and the background-tracking option

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
With this document	Director	A signed line: PWA acknowledged; tracking Option A or B	☐

WHAT WE NEED, EXACTLY

Written confirmation of two decisions already taken:

- **(a)** The Staff App is an installable web app (a PWA) on the same technology as the two web portals, not a native Flutter app (THC decision, 18.09.2026; the Scope's §1.3 fixed Flutter). It installs from a link, updates instantly and needs no app store. On iPhone, push notifications require adding it to the Home Screen, and the activation flow walks the worker through that.
- **(b)** Background location tracking for the whole shift (the Scope's BG-06 and BG-07). A web app records location at check-in, at check-out and while the app is open, but not with the phone in the pocket. Two options were set out. **Option A:** foreground-only tracking in v1; off-site departures are caught at check-out and through the "No check-out" flow, and BG-06/07 are recorded as partially met. **Option B:** the same app wrapped in a thin store-installed shell that adds background tracking, at additional cost and with app-store review. Please state whether B is required for v1 or A is accepted.

WHY THE PLATFORM NEEDS IT

One codebase for phone, tablet and browser, instant updates and no store review — against the one thing a web app cannot do, which is track a phone in a pocket (§1.3, §5.1, BG-06/07).

FORMAT AND EXAMPLE

A line in the reply: "PWA acknowledged; background tracking: Option A / Option B."

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

The app ships as a PWA with Option A behaviour. The check-in data already accepts background pings, so choosing B later needs no change to the data.

22 Acknowledge: Supabase and Vercel instead of Django on DigitalOcean or AWS

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
With this document	Director	A signed line	☐

WHAT WE NEED, EXACTLY

Written confirmation that the back end is **Supabase** — a managed PostgreSQL database with sign-in, file storage, background functions and scheduled jobs — with the three applications hosted on **Vercel**, rather than

Django/DRF on DigitalOcean or AWS (§1.1, §1.3). Everything the Scope calls “Django Admin” is a Settings page in the Back Office: the sender addresses, the Willo stage mapping, venue types, the rota guard.

WHY THE PLATFORM NEEDS IT

A managed database and hosting service instead of servers THC would have to run and patch; every rule in the Scope is unchanged. The practical consequence for THC is item 8: the production accounts are subscriptions in THC’s name.

FORMAT AND EXAMPLE

A line in the reply: “Supabase and Vercel acknowledged.”

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Not applicable — this is how the platform is built.

23 Acknowledge: the visual direction

NEEDED BY	WHO AT THC	FORMAT WANTED	STATUS
With this document	Director / whoever owns the brand	A signed line	☐

WHAT WE NEED, EXACTLY

Written confirmation of the visual direction settled on 21.09.2026 from the design boards supplied: **one rounded look** — pill-shaped controls, the Plus Jakarta Sans typeface, gradient primary buttons, violet for Auto-Assign — in **two grounds**: light on warm cream with soft shadows, dark on navy with a soft glow. The switch in the app changes only the ground. The ten brand colours and the accessibility contrast work are unchanged. This departs from the design pack’s literal rendering (zero radii and frosted glass, §1.6, §10.1), which stays reproducible in the code if THC ever wants it back.

WHY THE PLATFORM NEEDS IT

The boards THC supplied show the same four screens in a light and a dark version with identical geometry; only the ground changes. Every screen in all three applications now follows that.

FORMAT AND EXAMPLE

A line in the reply: “Visual direction acknowledged.”

HOW TO SEND IT

Email.

WHAT THE PLATFORM DOES UNTIL IT ARRIVES

Not applicable — this is how every screen is built.

Tools and accounts involved

Tool	What it is	Who owns the account today	Does THC need its own login?
Willo	Video-interview service. The application form creates each candidate there; Willo reports back when the interview is done and what was decided.	THC's own	Yes — it is THC's account already. We need three values from it (item 1).
Resend	The email-sending service the platform sends admin@ and timesheets@ mail through.	Build team	No login needed. The domain verification is on THC's DNS (item 7). The account transfers at hand-over.
Web Push	The phone notifications. No account: a key pair is generated once by the build team.	—	No.
Supabase	The database, file storage, sign-in and background jobs. London region.	Build team (staging)	A production organisation owned by THC (item 8), with the build team invited in.
Vercel	Hosts the three web applications.	Build team (staging)	A production team owned by THC (item 8).
Google AI Studio / Gemini	Reads uploaded documents to pre-fill dates and confidence; a manager always checks.	Build team	No. The key transfers at hand-over; THC's own account can be created then.
Mapbox	The map of venues and their geofences in the Back Office.	Build team	No. Transfers at hand-over.
GitHub	Where the code lives.	Build team	A THC organisation to receive the code at hand-over (item 8).

Returning the items

Reply to the covering email using the tracker numbers — for example “Item 7: done, records added on 3 October”. Documents and spreadsheets: by email for anything that holds no personal data; by a shared drive folder restricted to the build team for anything that does. Keys and secrets — item 1, and bank details if they are ever migrated under item 5 — by password-manager share or on a call, never by email or messaging app.

Build team contact: _____ (name · email · phone)

THC contact for this checklist: _____

What happens next. When items 7, 8 and 1 and the content items (2, 9, 10, 11, 12) are in, the build team switches email and push on, sets up THC's production accounts, and opens **UAT** on staging: THC's office team walks every screen with real content — a worker onboarded end to end, an event built, filled by auto-assign, checked in, checked out and timesheeted; a client signing in to see their line-up. In parallel the old-system export (5) is imported on staging for the **migration dry run** and the sample check (6). After sign-off, **go-live** is the production import, the switch to the final web addresses if THC wants its own, and the first live applicants. The accounts and the code then transfer to THC at hand-over.
